Art Unit: 2431

DETAILED ACTION

1. This action is in response to the amendment filed on 08/31/2009.

2. Claims 1 and 3 have been amended.

3. Claims 1-4 are pending for consideration.

Response to Arguments

4. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

- 5. Claims 2 and 4 are objected to because of the following informalities:
 - a. In line 1 of claim 2, the phrase "A programmable-logic-controller peripheral device" should be changed to "The peripheral device for the programmable logic controller".
 - b. In line 1 of claim 4, the phrase "A programmable-logic-controller peripheral device" should be changed to "The peripheral device for the programmable logic controller".

Appropriate correction is required.

Claim Rejections - 35 USC § 112

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2431

7. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- 8. Claim 1 recites the limitations "the authentication data" and "the programmable logic controller peripheral device" in line 4 and line 6, page 2 of the Claims. There is insufficient antecedent basis for this limitation in the claim.
- 9. Claim 3 recites the limitations "the authentication data" and "the programmable logic controller peripheral device" in line 2 and line 5, page 4 of the Claims. There is insufficient antecedent basis for this limitation in the claim.
- 10. The dependent claims are depended on the rejected base claim, and are rejected for the same rationales.

Claim Rejections - 35 USC § 103

- 11. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 12. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mehta et al. (US 7624281) (hereinafter Mehta) in view of Tatebayashi et al. (US 20050102527) (hereinafter Tatebayashi).

Regarding claim 1, Mehta discloses a peripheral device for a programmable logic controller, the peripheral device comprising:

an inputting means for inputting peripheral device authentication data being the same as the authentication data stored in a storage means of the programmable logic controller (Mehta: see figure 2; column 5 lines 38-67: user input housing; column 7 lines 8-25; column 7 lines 40-50; and column 8 lines 43-48: authentication module, emulation controller, input-output buffer...implemented as part of a single or multiple components (or any combination thereof (e.g., a programmable logic controller)));

Mehta does not teach an encryption means for encrypting peripheral device authentication data used in authentication for authorizing use of programmable logic controller peripheral device itself, encrypting data used in the programmable logic controller, and encrypting authentication data that is established in the programmable logic controller and that verifies whether or not communication with the programmable logic controller is authorized for the data used in the programmable logic controller; an external storage means for storing at least peripheral device authentication data having been encrypted; an internal storage means for storing at least peripheral device authentication data having been encrypted; a decryption means for decrypting the peripheral device authentication data, the data used in the programmable logic controller, and the authentication data; and verification means for determining whether or not Use of the programmable logic controller peripheral device is authorized, by checking peripheral device authentication data read out from the external storage

means and decrypted, against peripheral device authentication data read out from the internal storage means and decrypted.

However, Tatebayashi discloses an encryption means for encrypting peripheral device authentication data used in authentication for authorizing use of programmable logic controller peripheral device itself, encrypting data used in the programmable logic controller, and encrypting authentication data that is established in the programmable logic controller and that verifies whether or not communication with the programmable logic controller is authorized for the data used in the programmable logic controller (Tatebayashi: see figure 2, figure 5 and paragraphs 0118, 0145, 0186 and 0248); n external storage means for storing at least peripheral device authentication data having been encrypted (Tatebayashi: paragraphs 0083, 0101 and 0109); n internal storage means for storing at least peripheral device authentication data having been encrypted (Tatebayashi: paragraphs 0145 and 0160); decryption means for decrypting the peripheral device authentication data, the data used in the programmable logic controller, and the authentication data (Tatebayashi: see figure 5 item 333 and paragraphs 0145, 0160, 0170 and 0248); and verification means for determining whether or not Use of the programmable logic controller peripheral device is authorized, by checking peripheral device authentication data read out from the external storage means and decrypted, against peripheral device authentication data read out from the internal storage means and decrypted (Tatebayashi: paragraphs 0109 and 0181).

Therefore, it would have been obvious to a person skilled art at the time the invention was made to have included in Mehta the feature of Tatebayashi as discussed

Art Unit: 2431

above because there is a need for insuring secure data transmission, including transactional and credit card information, and for preventing unauthorized copying and use of software programs or packages (Tatebayashi: page 1).

Regarding claim 2, Mehta as modified discloses wherein when communication between the programmable logic controller and the programmable logic controller peripheral device is via a network: the encryption means is further for encrypting network authentication data for authorizing the communication between the programmable logic controller and the programmable logic controller peripheral device (Tatebayashi: paragraph 0248); the external storage means is further for storing the network authentication data (Tatebayashi: see figure 4); and the decryption means is further for decrypting the network authentication data stored in the external storage means (Tatebayashi: see figure 5 item 333 and paragraphs 0145, 0160 and 0170). The same motivation was utilized in claim 1 applied equally well to claim 2.

Regarding claim 3, this claim has limitations that is similar to those of claim 1, thus it is rejected with the same rationale applied against claim 1 above.

Regarding claim 4, Mehta as modified discloses wherein when communication between the programmable logic controller and the programmable logic controller peripheral device is via a network: the encrypter is further for encrypting network authentication data for authorizing the communication between the programmable logic

Art Unit: 2431

controller and the programmable logic controller peripheral device (paragraph 0248); the external storage is further for storing the network authentication data (Tatebayashi: paragraphs 0083, 0101 and 0109); and the decrypter is further for decrypting the network authentication data stored in the external storage (Tatebayashi: see figure 5 item 333 and paragraphs 0145, 0160 and 0170). The same motivation was utilized in claim 1 applied equally well to claim 4.

Conclusion

13. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
